Our clients

Fabnite

Norway

Digital ecosystem for handling events

Fabnite is a complete digital ecosystem for handling events and venues of all sizes and categories. The solution includes web and mobile applications.

Our clients

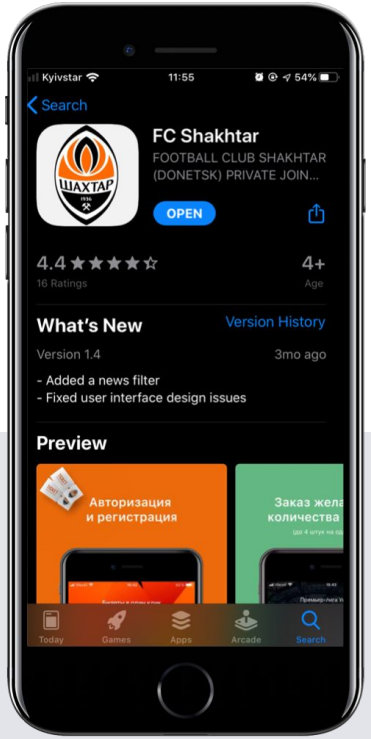
FC Shakhtar

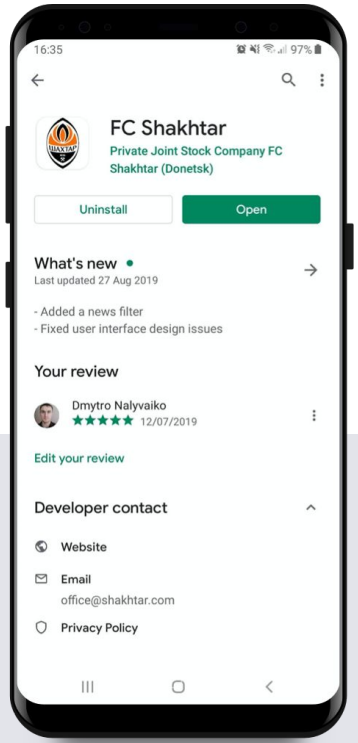
Ukraine

Mobile application for the football club

FC Shakhtar is one of Ukraine's most decorated football clubs. In order to unite the community of the brand and bring fans of “Shakhtar” all over the world together, the company has developed and launched mobile applications for Android and iOS devices.

[Learn more about this project]





Our clients

izy

Norway

Tenant experience app

Izy assists tenant employees of the business centers to order and receive different services offered internally or externally apart from the building. It consists of a web platform, as well as iOS and Android applications.

Our clients

SOFTSEAWEED

Norway

A clickable prototype for seaweed farm management app

SoftSeaweed assists seaweed farmers in planning and executing their daily operations. The client enlisted Axon to create a mobile application prototype, and technical requirements for an MVP.

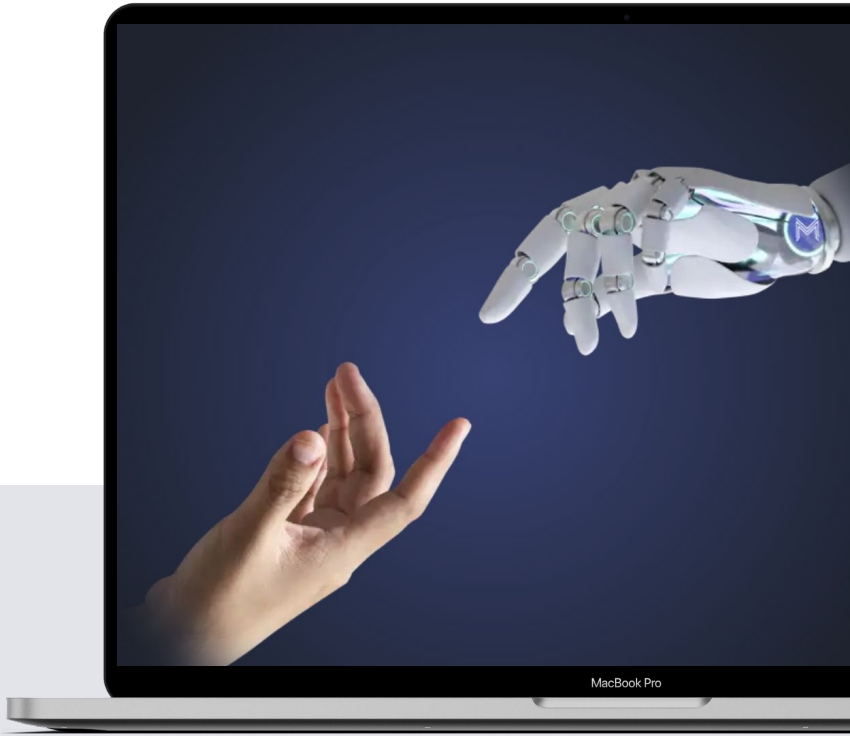
Our clients

madgicx

Israel

Ad Optimization Platform

Madgicx is an AdTech platform that empowers Ecom businesses by saving time and making their advertising budgets more profitable.



Our process

1

PROJECT DISCOVERY PHASE

Delivering a clear vision of the software solution with detailed project scope and validated features.

2

SOFTWARE ARCHITECTURE

Building the architecture for your solution for ease of implementation, interoperability with your existing applications, and providing a framework for future growth.

3

UX/UI DESIGN

Delivering turnkey UI/UX design solutions to make your product interface easy-to-use and intuitively understood by customers.

4

FRONT-END DEVELOPMENT

Providing interfaces with the implementation of visual and interactive elements that will engage and satisfy your customers.

Our process

5

MOBILE DEVELOPMENT

Delivering iOS, Android, and Flutter mobile applications that meet the needs of your customers.

6

BACK-END DEVELOPMENT

Developing server side for your solution to ensure the performance of high-level functionality.

7

THIRD-PARTY INTEGRATION

Enhancing your solution with additional services through the integration of external platforms with a third-party API.

8

QUALITY ASSURANCE

Applying manual and automated testing methods to guarantee you the ROI-efficient solution.
